EDUCATION

Texas A&M University, College Station, Texas
Bachelor of Science in Computer Engineering

December 2026

Relevant Coursework: Data Structures & Algorithms, Circuit Theory, Signals and Systems, Computer Architecture & Design, Intro to Computer Systems, Electronics, Microcomputer Systems, Advanced Computer Architecture

TECHNICAL SKILLS

Programming Languages: Proficient in *C++* and *Verilog*; Familiar with *Python*, *C*, and *R*

Tools/Technologies: Github, Linux, LTspice, Vivado, SMX, Oscilloscope, Arduino, GCP, Raspberry PI, AWS, SQL, Auto CAD

PROJECTS

Dungeon Crawler

October 2024

- Engineered a grid-based dungeon crawler engine using dynamically allocated 2D arrays to represent multi-level maps, enabling real-time map resizing and integrated file I/O to load/save game state
- Designed and implemented turn-based combat, and item pickup/drop
- Written in C++ and received top marks and my personal favorite project

Graph Algorithms

April 2025

- Implemented Dijkstra's shortest-path algorithm using a min-heap priority queue, written in C++ and received top marks
- Built Topological Sort via depth-first search (DFS), validating Directed Acyclic Graph inputs and detecting cycles

Home Security System

July 2025

- Designed a home security system that utilizes an Arduino UNO, Husky Lens, and python
- Uses a Husky Lens to perform face detection, and if an unknown face is seen, it will release an alarm signal
- Using python and pandas, the script reads from the serial output of the Arduino and writes the timestamp and who was detected onto an excel file

Sonar

August 2025

- Developed a sonar device using an Arduino UNO, ultrasonic sensor, and servo
- Arduino ide handles calculations such as distance and wrote a python_script that pulls from the Arduino's output and creates a GUI that displays the angle and distance an object is from the device

WORK EXPERIENCE

Network Engineering Intern at Etex, Gilmer, Texas
2025

June 2025 –August

- Refurbished and reconfigured Optical Network Terminals for client deployment, cutting future maintenance time
- Increased operational efficiency by upgrading software on network cards
- Shadowed senior network professionals to gain hands-on experience with industry standard hardware

Waiter at The 19th Hole, Hawkins, Texas

June 2022-August 2024

- Provided high quality customer service in a fast paced restaurant environment, ensuring customer satisfaction
- Collaborated closely with kitchen and bar staff to coordinate orders and maintain smooth service

COMMUNITY ENGAGEMENT

Phi Theta Kappa, Tyler, Texas

August 2023-Present

- Contributed to chapter meetings and volunteer events that advanced PTK's mission of academic excellence
- Collaborated with peers on community outreach and campus engagement projects promoting academic success and student development

Stem Club, Tyler, Texas

August 2023-May 2024

- Engaged weekly with peers and faculty to explore applications of engineering, physics, and math in hands on experiments/demonstrations
- Participated in technical workshops and guest lectures exploring innovations in robotics, automation, and sustainable design

Stem to Stocks, College Station, Texas

August 2025-Present

- Collaborated with a dedicated team to enhance professional and leadership skills through hands-on workshops
- Participated in a series of targeted seminars led by engineering alumni in financial careers, gaining exposure to fields such as consulting, investment banking, and quantitative finance.
- Built foundational knowledge in financial markets and business concepts through exclusive access to events, business lectures, and MSF program resources
